Indhold	<p>Public economics is the study of the government policy through the lens of economic efficiency and equity. Micro-economic and macro-economic theory is used to assess whether the private market is likely to provide efficient outcomes in the absence of governmental interventions. International Public Economics (IPE) explores the causes and consequences of differences among governments' alternative approaches to fundamental public policy issues as well as the impact of the European Union (EU) and globalization on national government policies and on European level policies. The international dimension is reflected also in the course structure with cross-national, European and global perspectives on public economics. Therefore, the course is built around three blocks reflecting important areas in public economics in an international perspective: I. Cross-national Analysis of Public Policies: efficiency and equity; distributional effects; market failure, government failure, and family failures II. European Public Economics: Consequences of European integration on public finances nationally and at the European level III. Global Perspectives: Trade, currency and the environment In broad terms there is in addition an underlying broad thematic division where the first block looks at public policies that affects social aspects of inequality and inclusion, the second block the at (macro) economic aspects of growth, and the third block contextual aspects, especially issues of the environment. Hence, the course reflects on strategies like the EU2020 strategy on smart, inclusive and green growth that sets the national reform programs in EU 28 thereby increasing the relevance of the course. There are 15 sessions of each four hours. Two hours are lectures and two hours are various forms of exercises. Requested readings are expected read in advance just as there may be other assignments in between sessions. In addition to sessions there is a one-day workshop with the other two semester courses. Guest lecturers may be used on special topics.</p>
